

NUTRISUN

Nutrisun is a patented, proprietary germplasm that delivers sunflower oil with a special content of fatty acids. The high stearic, high oleic sunflower oil (HSHOSO) is the only saturated fatty acid that does not raise levels of bad cholesterol.

5th in
the
world

seed company ranked by Access to Seeds Index for helping smallholder farmers to increase their productivity and grow more nutritional food.

Nutrisun

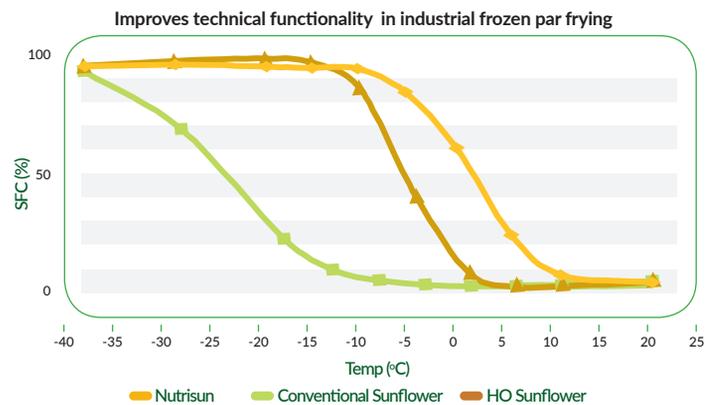

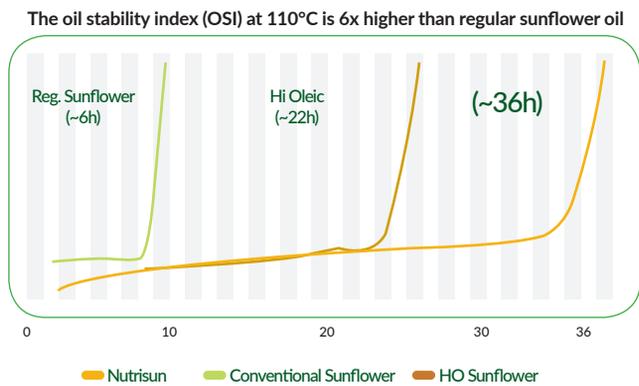

A GMO-free sustainable source for oil. Nutrisun is a natural, High Stearic, High Oleic, Sunflower Oil (HSHOSO) derived from conventional breeding of hybrid seeds. Compared to regular sunflower oil fatty acid profile, Nutrisun contains 4x more stearic acid and 3x more oleic acid.

Fatty Acid Composition	
Stearic (18:0)	18%
Oleic (18:1)	70%
Linoleic (18:2)	4%
Palmitic (16:0)	4%
Trans	0%
Others	4%

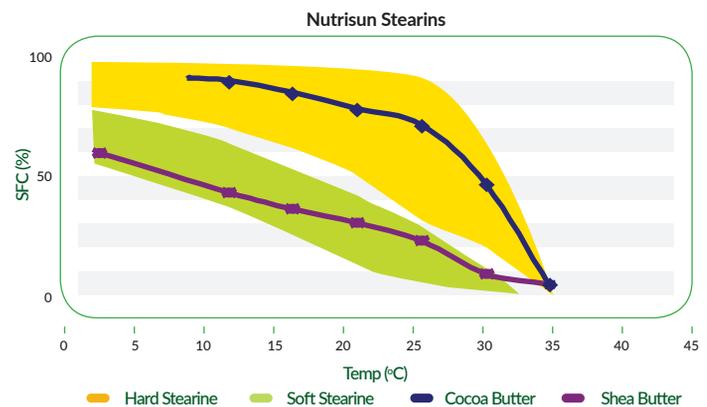

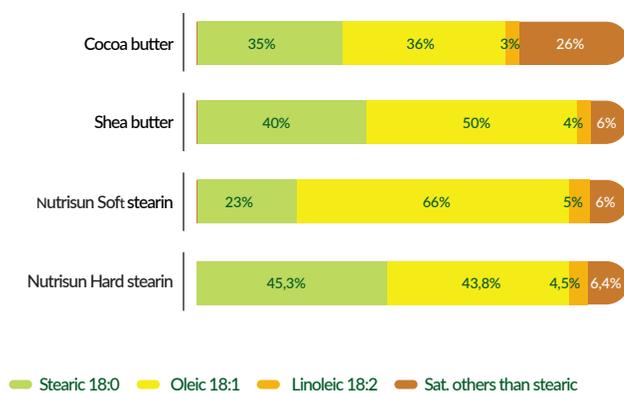

Improve Efficiency

Enhance shelf life and improve frying volume. Nutrisun's fatty acid profile yields high oxidative stability, even when blended with other vegetable oils such as soybean, rapeseed, canola, palm. This means the oil can last 6x longer in a fryer with added nutritional benefit and increases shelf life in packaged foods.

Healthier replacement

Appeal to health-conscious consumers. Studies have shown a link between trans fatty acid consumption and cardiovascular disease. Nutrisun oil is a nutritional replacement to unhealthy, partially hydrogenated oils rich in trans fatty acids. HSHOSO can yield different kinds of stearins and oleins that cover a range of fats for bakery products, margarine, chocolates, ice cream and more!

Available Now

NS08 sunflower seeds are packed in 10kg seed bags and have regulatory approval.
